

Lesson Plan: IP Surveillance **(Time Agenda: 4 Days – 16 Hours)**

IP Video Surveillance is a 16-hour course detailing the ins and outs of an IP-based video surveillance system. Cameras and their functions, cabling, networking, management and recording servers, software analytics and licensing, power requirements, and tips for designing, installing, and troubleshooting camera systems are explained. Participants will connect and test network connections, connect and discover network cameras and devices, explore camera settings and features, and learn how to program IP surveillance devices for optimal performance using the latest equipment in the hands-on lab portion of the course.
